PROFILE

Computer Science undergraduate (CGPA: 8.41) with hands-on experience building enterprise-grade full-stack platforms and GenAI-powered web applications using Node.js, Express, React, and MongoDB. Proven track record architecting role-based ERP systems with atomic transaction pipelines, direct LLM API integrations (Grok, Google Gemini), and deploying secure cloud services to Render. Comfortable across Python, JavaScript, REST API design, and CI/CD automation, seeking a software engineering or full-stack developer internship.

EDUCATION

Chitkara University, Punjab **Sep 2023 – May 2027**
Bachelor of Engineering in Computer Science and Engineering — CGPA: 8.41 Rajpura, Punjab

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Java, C/C++, SQL
- **AI & LLM Integration:** Grok AI API, Google Gemini API, Generative AI API Integration, LLM-powered Feature Development
- **Frameworks & Backend:** Node.js, Express.js, React.js, REST APIs, MVC Architecture, Microservices, Spring Boot
- **Cloud & DevOps:** AWS, Google Cloud Platform, Docker, Jenkins (CI/CD), GitHub Actions (CI/CD), Cloud Deployment
- **Databases:** MongoDB, MySQL
- **Developer Tools:** Git, GitHub, Linux/Unix, VS Code, Postman
- **Core CS & Practices:** Data Structures & Algorithms, OOP, System Design (Basics), Agile/SDLC, Testing Fundamentals

CERTIFICATIONS

- ServiceNow Certified System Administrator (CSA)
- ServiceNow Certified Application Developer (CAD)

PROJECTS

Institutional College ERP System | *React.js, Node.js/Express, MongoDB, TailwindCSS, JWT, REST APIs*
Live: college-erp-frontend-lira.onrender.com | API: college-erp-backend-hj58.onrender.com

- Architected an enterprise multi-tenant ERP platform supporting 5 roles (Admin, Faculty, Student, Accountant) with granular RBAC, session revocation via token versioning, and cryptographic password resets
- Engineered atomic fee payment processing with MongoDB aggregation pipelines (`$inc`, `$cond`) eliminating race conditions and overpayments, with synchronized on-screen and downloadable PDF fee receipts
- Built timezone-resilient academic attendance recording with multi-period/lab slot indexing and real-time debarment alerts, plus unpaginated cohort data exports (.xlsx/.csv via ExcelJS)
- Automated end-to-end integration testing in CI covering authentication, RBAC authorization, and API route security

AI Resume Optimizer | *React.js, Node.js/Express, MongoDB, Grok AI API, REST APIs*

- Built a full-stack AI-powered platform that analyzes resumes against job descriptions and generates ATS-focused optimization recommendations
- Integrated Grok AI API to parse resume content, detect missing keywords/skills relative to a target role, and generate personalized, section-level improvement suggestions
- Designed RESTful APIs with Node.js/Express and a responsive React.js frontend for resume upload, job-description comparison, and AI-generated results

AI-Based Plant Disease Detection & Report System | *Node.js/Express, MongoDB, Google Gemini API, REST APIs, PDFKit*
Live: plantscan-o7ji.onrender.com

- Built a backend-driven web application that lets users upload plant images and receive AI-generated disease diagnosis reports, powered by Google Gemini API image-based inference
- Designed RESTful APIs for image upload, AI model invocation, and report generation; implemented JWT-based authentication with encrypted password storage
- Integrated PDFKit to generate downloadable clinical diagnostic PDF reports complete with disease severity indicators, prevention measures, and care regimens
- Deployed and hosted the live web application on Render with environment-based secret and configuration management, achieving sub-3s inference latency
